

PROFESSIONAL SUMMARY

Data and systems analyst who builds reproducible operational analytics products from raw data through tested deployment. Project work covers revenue reconciliation, predictive maintenance, and safety analytics using Python, SQL, machine learning, APIs, and interactive dashboards. Communicates model limits and financial assumptions clearly to technical and executive audiences.

TECHNICAL SKILLS

Analytics	Python, pandas, NumPy, SQL, data cleaning, statistical testing, KPI design
Machine learning	scikit-learn, XGBoost, SMOTE, grouped validation, threshold tuning, SHAP
Applications	FastAPI, Streamlit, React, TypeScript, Recharts, REST APIs
Engineering	Git, GitHub Actions, Docker, pytest, Ruff, data-quality gates, ETL pipelines

SELECTED PROJECT EXPERIENCE

KPC Order-to-Cash Leakage Reconciliation | Python, FastAPI, React, Docker

- Built an end-to-end pipeline that reconciles 2,826 synthetic loading records across five mutually exclusive leakage categories, preserving a no-double-counting financial invariant. Added structural data-quality gates, REST endpoints, an executive dashboard, CI, Docker deployment, and 31 automated tests.

PumpGuard Ops Predictive Maintenance | Streamlit, XGBoost, scikit-learn

- Converted 2,496 historical readings from 24 synthetic pumps into a seven-day risk queue with CSV validation and model contribution summaries. Grouped evaluation achieved ROC-AUC 0.943, 81.5% recall, and a 2.7% false-positive rate. Delivered local, Docker, and cloud-ready run paths with 13 tests.

Safety Command Center | Streamlit, Plotly, pandas

- Analyzed 445 HSE incident records across seven Kenyan depots. Built reactive site, date, incident-type, and department filters with critical-event alerts and CSV export. Identified 12 Mombasa chemical-exposure incidents, including eight flagged for potential serious injury or fatality.

PROFESSIONAL DEVELOPMENT

Data Analytics with AI - Inuka Fellowship, Power Learn Project | 2026

Twelve-week portfolio programme covering operational analytics, data engineering, statistics, dashboarding, supply-chain analysis, machine learning, AI-assisted development, analytics strategy, and executive communication.

ADDITIONAL EVIDENCE

GitHub portfolio includes executable notebooks, business briefs, dashboard applications, test suites, Docker configurations, and documented model limitations. Available at github.com/lameckirungu/plp_data.
